The percentage of U.S. top grossing films featuring female protagonists declined precipitously from 40% in 2019 to 29% in 2020. 49% of films featured male protagonists, and 22% had ensembles or a combination of male and female protagonists (see Figure 1).

In 2020, females accounted for 38% of major characters. This represents an increase of 1 percentage point from 37% in 2019. Males comprised 62% of major characters (see Figure 2).

Females made up 36% of all speaking characters, an increase of 2 percentage points from 34% in 2019. Males accounted for 64% of speaking characters (see Figure 3).

79% of films featured more male than female characters. Only 17% of films had more female than male characters. 4% of films featured equal numbers of female and male characters.

The following summary reports the findings of a content analysis of over 1,700 characters appearing in the top 100 domestic grossing films of 2020. This report provides historical comparisons from last year with figures dating back to 2002. Overall, this analysis considers the representation of almost 22,000 characters appearing in approximately 1,000 films.
The findings are divided into four major sections. The first section reports the percentages of female and male characters in top grossing films. The second section details various demographic traits of characters, including age, race/ethnicity, marital status, and occupational status. The third section reports the goals and roles held by characters. The fourth section discusses important relationships between on-screen representations of female characters and behind-the-scenes employment of women as directors and writers.

**Findings/ Female and Male Characters**

- In 2020, the percentage of top grossing films featuring female protagonists declined 11 percentage points from 40% in 2019 to 29% (see Figure 4). This is even with the percentage achieved in 2016. 49% of films featured male protagonists, and 22% had ensembles or a combination of male and female protagonists. For the purposes of this study, protagonists are the characters from whose perspective the story is told.

- Female protagonists were most likely to appear in horror features (39%), followed by dramas (22%), action features (22%), comedies (9%), animated features (4%), and features in other genres (4%). Male protagonists were most likely to appear in dramas (49%), followed by action features (18%), comedies (15%), animated features (10%), and horror features (8%).

- Females accounted for 38% of major characters (see Figure 5). This represents a slight increase of 1 percentage point from 37% in 2019, and a recent historic high. Males comprised 62% of major characters. For the purposes of this study, major characters appear in more than one scene and are instrumental to the action of the story.
Females comprised 36% of all speaking characters in 2020 (see Figure 6). This represents an increase of 2 percentage points from 34% in 2019 and a recent historic high. Males accounted for 64% of speaking characters.

23% of films featured 0 to 4 female characters in speaking roles, 47% had 5 to 9 females, and 30% had 10 or more females. In contrast, 10% of films featured 0 to 4 male characters in speaking roles, 25% had 5 to 9 males, and 65% had 10 or more males.

79% of films featured more male than female characters. Only 17% of films had more female than male characters. 4% of films featured equal numbers of female and male characters.

Findings/Demographic Characteristics

Female characters remained younger than their male counterparts (see Figure 7). The majority of female characters were in their 20s (24%) and 30s (29%). The majority of male characters were in their 30s (31%) and 40s (28%).
• Males 40 and over accounted for 52% of all male characters. Females 40 and over comprised 32% of all female characters.

• There were almost twice as many male characters as female characters aged 60 and over. 6% of female and 10% of male characters were in their 60s or older.

• Findings for major female characters are quite similar to the findings for all female speaking characters. Major female characters are younger than major male characters. The majority (57%) of female characters are in their 20s (26%) and 30s (31%). The majority of male characters (52%) are in their 30s (27%) and 40s (25%).

• Major female characters experience a precipitous drop from their 30s to their 40s (from 31% to 13%). Major male characters experience a decline in numbers from their 40s (25%) to their 50s (14%). The chasm between major male characters and female characters 60 and older is greater for major characters than characters in all speaking roles, with 6% of female characters and 13% of male characters in this age cohort.

• In 2020, 71% of all female characters with speaking roles were White, 17% were Black, 6% were Latina, 6% were Asian, and 1% were of some other race or ethnicity (see Figure 8). 73% of all male characters were White, 16% were Black, 6% were Latino, 4% were Asian, and 1% were of some other race or ethnicity.
• 71% of all female characters were White in 2020. This represents an increase of 3 percentage points from 68% in 2019 (see Figure 9).

• 17% of all female characters were Black in 2020. This represents a decline of 3 percentage points from 20% in 2019.

• 6% of all female characters were Latina in 2020. This represents a slight increase of 1 percentage point from 5% in 2019.

• 6% of all female characters were Asian in 2020. This represents a decline of 1 percentage point from 7% in 2019.

• In 2020, 74% of major female characters were white, 13% were Black, 6% were Latina, and 6% were Asian, and 1% were of some other race or ethnicity.

• Female characters were more likely than male characters to have a known marital status. 47% of female characters but 35% of male characters had a known marital status.

• A larger proportion of male than female characters had an identifiable occupation. 73% of male characters but 57% of female characters had an identifiable job or occupation.

• A larger proportion of male than female characters were seen in their work setting, actually working (59% vs. 42%).

Figure 9. Historical Comparison of Race/Ethnicity for Female Characters

Findings/Goals and Roles

• Male characters were more likely than females to have primarily work-related goals (41% vs. 32%). Female characters were more likely than males to have primarily personal life-related goals (19% vs. 10%).

• Male characters were more likely than females to be seen in primarily work-related roles (59% vs. 41%). Female characters were more likely than males to be seen in primarily personal life-related roles (54% vs. 36%).
Findings/Behind-the-Scenes Employment and On-Screen Representation

• Films with at least one woman director and/or writer were more likely than films with no women in these roles to feature higher percentages of females as protagonists, in major roles, and as speaking characters.

• In films with at least one woman director and/or writer, females comprised 60% of protagonists. In films with exclusively male directors and/or writers, females accounted for 17% of protagonists (see Figure 10).

• In films with at least one woman director and/or writer, females comprised 49% of major characters. In films with exclusively male directors and/or writers, females accounted for 35% of major characters.

• In films with at least one woman director and/or writer, females comprised 43% of all speaking characters. In films with exclusively male directors and/or writers, females accounted for 34% of all speaking characters.

Figures based on top grossing films as rated by Box Office Mojo, January 1, 2021.

This study has traditionally tracked the top grossing and thus the most watched films of the year. Due to the interruption caused by Covid-19 to theatrical box office releases, the Digital Entertainment Group’s “Watched at Home” list from March through December 2020 was compared to the top 100 list as a check that these films reflect the films that were the most viewed. The DEG list includes U.S. digital sales, digital rentals (VOD), DVD and Blu-ray. This list does not include premium VOD. Every recently released U.S. film that appeared on the weekly list at least once was included. There was a good deal of overlap between the list of the watched at home films and the top grossing films at the box office. 63% of the films appear on both lists. This indicates that the majority of the top 100 grossing films reflected the films that people watched in 2020.

Every film in the sample was viewed one or more times in its entirety. Every character who was seen speaking at least one line was included in the study.

For the purposes of this study, protagonists are the characters from whose perspective the story is told. Major characters appear in more than one scene and are instrumental to the narrative of the story.
