Understanding Cialis (Tadalafil)

Cialis is a phosphodiesterase type 5 (PDE5) inhibitor used to treat **erectile dysfunction** and symptoms of benign prostatic hyperplasia (BPH). The most common dosage is **Cialis 20 mg**, taken as needed or daily depending on your doctor's prescription.

When you **order Cialis online**, it's important to ensure that the product comes from a licensed pharmacy and matches your prescribed dosage. Buying from an unverified source could lead to counterfeit products, ineffective treatment, or health risks.

1. **Choose a licensed pharmacy:** Confirm the pharmacy is registered with local or national authorities.
2. **Submit a prescription:** Legitimate online pharmacies require a valid doctor's prescription before dispatch.
3. **Avoid unverified sellers:** Websites claiming "no prescription required" may sell counterfeit or unsafe Cialis.

Following these steps protects your health and ensures compliance with legal standards.
